Work Experience

DeltaX <i>AI Research Engineer</i>	Apr. 2025 – Present <i>Seoul, Korea</i>
◦ Developed a monocular 3D human body reconstruction pipeline for In-Cabin Monitoring System (ICMS), including 3D keypoint estimation, mesh reconstruction, and model optimization for deployment on TI automotive hardware. ◦ Researched 3D facial landmark estimation and developed a monocular 3D gaze estimation model for in-cabin driver monitoring. ◦ Designed and built a ground-truth data collection lab for 3D vision research, collected and curated 3D datasets, and contributed to defining data annotation and labeling guidelines.	

Projects

Video Generation with Reference Image and Pose Guidance <i>KAIST NMAIL</i>	Aug. 2024 - Jan. 2025
◦ Led a research team on video generation using motion data. ◦ Developed a diffusion-based video generation model guided by reference images and pose sequences. ◦ Re-trained the model on open datasets and validated it using self-collected MoCap and IMU sensor data.	
Human Motion to 3D Object Generation <i>KAIST NMAIL</i>	Feb. 2024 - Dec. 2024
◦ Proposed a framework for generating interacting objects from human motion sequences by predicting contact points and understanding sequential point clouds. ◦ Achieved state-of-the-art performance on PROX and HUMANISE datasets.	

Research Experiences

KAIST NMAIL

Mar. 2023 – Feb. 2025

Master's Researcher

- Advisor: Prof. Sungho Jo
- Conducted research on human motion analysis using various sensors
- Developed uncertainty-aware motion estimation frameworks and interacting object prediction models.

NAVER Maps Mobile

Dec. 2021 – Feb. 2022

AI Engineer Intern

- Advisor: Changgi Kim
- Developed a subway boarding and alighting notification app using mobile sensor data
- Designed an algorithm to predict subway operational states (e.g., running, stopping) using sparse GPS data, accelerometer, gyroscope, and barometer readings

KAIST MLILAB

Jun. 2021 – Nov. 2021

Undergraduate Research Intern

- Advisor: Prof. Eunho Yang
- Studied foundational machine learning research papers to build theoretical knowledge
- Implemented model, conducted extensive experiments, and analyzed results to evaluate performance

Teaching Experiences

CS270: Intelligent Robot Design and Programming

Mar. 2024 – Jul. 2024

Teaching Assistant for Robotics Programming

Pre-URP

Jun. 2024 – Nov. 2024

Teaching Assistant for Deep Learning based Image Style Transfer Model

SoC Co-op

Dec. 2023 – Feb. 2024

Teaching Assistant for Digital Human Agent Research

Counseling Assistant

Mar. 2023 – Feb. 2024

Head Counseling Assistant for providing academic and career guidance to students

Other Experiences

Mobile World Congress (MWC) 2026

Mar. 2026

- Demonstrated DeltaX's ICMS technology and presented its computer vision capabilities to global automotive stakeholders.

AttentionX

Jan. 2025 – Present

- Conducting research on 3D Diffusion and Motion

Softrobot Symposium & SRRC Workshop

Aug. 2024

- Presented research findings in a poster session and an oral presentation.

KAIST MAD Camp

Dec. 2021 - Feb. 2022

- Developed a website, "KAIST Dormitory Community" for student communication
- Developed a social networking diary app, "Empathy Diary", to enhance emotional sharing
